

George W Bush Intercontinental Airport

The chilled water pipes at George W Bush Intercontinental Airport (IAH) were being replaced and needed to be insulated. The scope of work included priming, insulating and jacketing with aluminium 5,000 linear feet of 36-inch chilled water piping, making this one of the biggest insulation projects in Houston in 2011/2012.

Building Specialties was able to complete the insulation work under strict time constraints and within considerable airport security measures and safety guidelines.
